

Nokia 7950 Extensible Routing System

Release 15.1

The Nokia 7950 XRS is a next-generation core routing platform that delivers the scale, efficiency and versatility needed to stay ahead of evolving service demands driven by the cloud, 5G and the Internet of Things.

Scale, efficiency and versatility are critical success factors for network operators in order to sustain profitable growth in a fiercely competitive market where the only constant is change.

Proven innovations lie at the heart of the 7950 XRS family, from its silicon to its software and its integration capabilities. It allows building a core network with headroom to meet capacity demands well into the next decade while covering the full range of capabilities to cost-effectively address your IP routing, Internet peering, multiprotocol label switching (MPLS) and infrastructure service requirements on a common core platform.

Powered by FP4, Nokia's industry-leading 2.4Tb/s routing silicon, the 7950 XRS achieves tremendous scale and efficiency without compromising versatility. FP4 silicon offers 6 times the scale and double the efficiency of FP3. FP4 hardware is backwards compatible with FP3 features and adds enhanced packet intelligence and control capabilities. This enables network operators to rethink existing restrictions and conventions, and build a capable and converged core network that can scale in a smart way, with superior return on investment.

The 7950 XRS is deployed globally by telecom, cable, mobile, utility and private network operators of any size as well as major webscale operators and internet exchange providers.

7950 XRS family overview

The 7950 XRS family is designed to meet the needs of global, national, regional and private network operators of all sizes.

It offers a common platform that addresses the full spectrum of networking needs for public and private internet backbones and peering points, metropolitan and regional aggregation hubs as well as cloud, data center and mobile core infrastructure. This will enable network operators to deliver the immersive ultra-broadband service experiences that consumers aspire to today and will expect tomorrow.

One platform for all services

The 7950 XRS addresses the full range of core routing requirements using common hardware that is powered by Nokia's FP4 and/or FP3 routing silicon and runs the proven, resilient and feature-rich Nokia Service Router Operating System (SR OS).

A flexible, pay-as-you-go software licensing model allows you to build a versatile, reliable and converged core network that evolves with your needs while protecting your hardware investments.

Scale with superior economics

A modular and extensible hardware design ensures granular and economical scaling of switching capacity and port density. A single 7950 XRS-20e chassis equipped with FP4 hardware delivers up to 96 Tb/s half duplex switching capacity, with port densities of up to 480 100GE or 4,800 10GE interface ports, and flexible 10GE and 40GE breakout options provided by universal QSFP28 ports. A single chassis equipped with 6-port CFP8 XMA supports up to 120 400GE clear channel interfaces with SR, LR or FR optics.

IP/optical integration

Tunable 10G and integrated 100G coherent PM-QPSK tunable DWDM optics enable the 7950 XRS to directly interface with the photonic transport layer without requiring optical transponders.

A standards-based GMPLS user-network interface (UNI) enables IP/optical control plane integration, allowing the 7950 XRS to efficiently coordinate IP routing and transport requirements across administrative boundaries and to dynamically set up optical segments and end-to-end transport connections.

Cross-domain management

The 7950 XRS is managed by the Nokia Network Services Platform (NSP), supporting integrated element and network management with end-to-end orchestration of network resource provisioning and assurance operations. Operational tools, including the Nokia 5650 Control Plane Assurance Manager (CPAM), provide additional visibility and flexibility in monitoring and troubleshooting IP control plane issues.

Carrier SDN integration and automation

The 7950 XRS and SR OS enable multivendor SDN control integration through OpenFlow, PCEP and NETCONF/YANG. Network operators can leverage the 7950 XRS in combination with the NSP to introduce scalable and integrated carrier SDN control across IP, MPLS, Ethernet and optical transport layers.

The NSP supports unified service automation and network optimization with comprehensive path computation capabilities to enable source-based routing and traffic steering with segment routing support, online traffic engineering and resource optimization, and elastic bandwidth services for dynamic cloud applications. The NSP is further assisted by Nokia Deepfield analytics to support insight-driven automation of network and flow optimization as well as DDoS attack mitigation.

Common elements and attributes

The 7950 XRS core router family shares fundamental attributes that ensure consistency, operational ease of use and investment protection for network operators.

Routing silicon

The 7950 XRS leverages Nokia's industry-leading FP4 NPU routing silicon to ensure optimal performance and scaling of a rich and complete Layer 2 and Layer 3 feature set that addresses all core deployment scenarios. The 2.4 Tb/s FP4 chipset is Nokia's fourth-generation NPU leveraging state-of-the-art 16nm 2.5/3D FinFET Plus silicon technology. It is the industry's first multiterabit routing silicon, and provides the perfect geometry for high-density 100 and 400G interface modules, with support for 1TE line rates as standards become available. It offers deterministic forwarding performance with enhanced packet intelligence and control capabilities for advanced traffic management and granular DDoS filtering policies.

These silicon innovations drive the high level of flexibility and performance needed for converged backbone and metro core deployments, including IP routing and peering, MPLS switching, VPN infrastructure services and data center interconnection applications.

Interface modules

The Nokia 7950 XRS uses a pair of complementary modules to support current and future interfaces. XMA Control Modules (XCMs) contain a slot-level control plane subsystem and switch fabric interface. Expandable Media Adapters (XMAAs) contain the forwarding complex and provide a wide range of GE, 10GE, 40GE, 100GE and 400G interface options.

A flexible software licensing scheme allows for customizing XMAAs for diverse core router applications, with configurable quality of service (QoS) granularity. This enables operators to consolidate core routing systems on a single platform, and to rapidly respond to evolving requirements with minimal impact and maximum investment protection.

Operating system

The 7950 XRS family is based on the proven SR OS, carrying forward over a decade of experience in the IP networks of more than 750 network operators worldwide. With a single common OS across the Nokia routing portfolio, network operators benefit from an extensive track record of reliability in the field and a full suite of features to enable resiliency, high availability and in-service software upgrades (ISSUs).

Power and cooling efficiency

The 7950 XRS system design incorporates intelligent power management capabilities to monitor power consumption of individual components, assure power safety thresholds, and manage power-up and power-down priorities in the event of degraded power availability. Other key enhancements include clock gating techniques that dynamically reduce power to system components not in use.

Redundant, modular fan trays that are linearly modulated provide appropriate and efficient cooling with reduced noise levels. The 7950 XRS-20 uses two linear, 1+1 redundant fan trays in a stacked configuration for primary system cooling while the XRS-20e uses three impeller fan trays in a side-by-side configuration.

A "pull" airflow design, in combination with impedance panels and air guides, ensures an even distribution of air to every section of the system. Hot air exhaust through the back of the chassis ensures a clean separation between the hot and cold aisles. An optional top plenum accessory is available for the 7950 XRS-20 to enable hot air exhaust at the top of the chassis for additional cooling efficiency.

7950 XRS-20e

The Nokia 7950 XRS-20e delivers up to 96 Tb/s half duplex routing capacity in a single 19-in rack.

The XRS-20e offers 20 slots with enhanced power and cooling capacity to support 2.4 Tb/s full duplex aggregate interface capacity. Fully equipped with FP4 hardware, it offers up to 480 100GE, 120 400GE or 4,800 10GE wire rate ports in a single rack, with additional 10 and 40G breakout options.

The XRS-20e comes in two chassis variants: a universal variant supporting all AC and DC power options, and an AC/HVDC variant. The XRS-20e is functionally compatible with the XRS-20. All hardware components except the fan trays and XMA Control Modules are common and interchangeable.

7950 XRS-20

The Nokia 7950 XRS-20 provides up to 64 Tb/s half duplex routing capacity in a single 19-in rack.

Each XRS-20 system offers 20 slots, each capable of 1.6 Tb/s full duplex aggregate interface capacity. Fully equipped with FP4 hardware, it offers up to 320 100GE, 80 400GE or 3,200 10GE ports in a single rack.

The 7950 XRS-20 supports a mix of FP4- and FP3-based XCMs and XMAs in the same chassis by exchanging the SFM cards for FP4 variants. All other hardware components, including CPM, CCM, fans and APEQs, can be reused to maximize investment protection.

Hardware overview

All common equipment components are redundant and field replaceable to maximize system uptime.

Chassis Control Modules (CCMs)

Redundant CCMs support operator access to the Nokia 7950 XRS control and management interfaces. The CCMs are located at the top, and each CCM has an LCD touch-screen display and supports interfaces for timing, management, alarms and memory expansions.

Advanced Power Equalization Modules (APEQs)

APEQs provide power for the 7950 XRS and include built-in intelligence to monitor and communicate available power budget versus actual consumed power. The low-voltage DC APEQs deliver up to 4725W each. The high-voltage DC APEQs take 260-400 V and provide 3,000W each. AC APEQs take 200-240 V single phase and deliver 3,000W each. APEQs support cost-effective modular expansion as required.

Fan trays

Fan trays provide system cooling for the 7950 XRS. Redundant fans can be controlled independently and fan speed is linearly modulated to allow for the optimal balancing of cooling, power and noise. The 7950 XRS-20 supports two stacked horizontal fan trays with 1+1 redundancy. The XRS-20e chassis variants support three side-by-side impeller fan trays with 2+1 redundancy.

Switch Fabric Modules (SFM)

SFMs enable the line-rate connectivity between all slots of a 7950 XRS chassis. The fabric cards are N+1 redundant with active redundancy and graceful capacity degradation in case multiple SFMs fail. The FP4-based SFM2 supports both FP4 and FP3 XCMs and XMA, enabling a simple and cost-efficient upgrade path for existing FP3 configuration by simply replacing the existing FP3-SFM cards. The initial SFM2 variant allows standalone system operation of the 7950 XRS-20 and XRS-20e.

Control Processor Modules (CPMs)

CPMs provide the management, security and control plane processing for the Nokia 7950 XRS. Redundant CPMs operate in a hitless, stateful, failover mode, and support system upgrades from FP3 to FP4 hardware. Central processing and memory are intentionally separated from the forwarding function on the interface modules to ensure utmost system resiliency. Each CPM contains a full FP3 complex to protect the control plane against denial of service attacks.

Expandable Media Adapters (XMA)

XMA provide the interface options for the 7950 XRS, including high-density GE, 10GE, 40GE, 100GE and 400GE interfaces. They contain an FP3- or FP4-based forwarding complex that performs typical functions such as packet lookups, traffic classification, processing and forwarding, service enablement and QoS. Each XMA also provides specific interface ports, physical media and optical functions. The broad range of universal interface modules and slot capacities can accommodate multiple networking roles and evolving deployment needs while protecting their 7950 XRS hardware investments.

XRS Control Modules (XCM)

XMA are equipped in an appropriate XCM. The XCMs contain a slot-level control plane subsystem and fabric interface to interconnect to the switch fabric modules (SFMs) via the chassis mid-plane. The XRS-20 and 20e each use dedicated XCM variants but share the same XMA. The FP3-based XCM variants each deliver 800 Gb/s full duplex slot capacity to a pair of 400G XMA or 200G C-XMA. The FP4-based XCM2 variant for the XRS-20 delivers 3.2 Tb/s full duplex capacity, while the XRS-20e variant delivers 4.8 Tb/s to a pair of FP4 XMA. The flexibility and modularity of XCMs and XMA allow network operators to granularly configure each chassis with its desired mix of interface ports to meet the demands of growing core networks.

Technical specifications

Table 1. Technical specifications for the Nokia 7950 XRS family

	7950 XRS-20e	7950 XRS-20
System capacity (half duplex)	16 Tb/s (FP3)/96 Tb/s (FP4)	16Tb/s (FP3)/64 Tb/s (FP4)
System design	Mid-plane	Mid-plane
Interface slots	20	20
Number of XMAs	20 per system	20 per system
Common equipment redundancy	CPM (1+1), CCM (1+1), DC APEQ (N+1), AC APEC (N+N), SFM (7+1), fan trays (2+1), power termination (1+1)	CPM (1+1), CCM (1+1), DC APEQ (N+1), AC APEC (N+N), SFM (7+1), fan trays (1+1), power termination (1+1)
Hot-swappable modules	CPM, CCM, XCM, XMA, C-XMA, APEQ, SFM, PIM, PCM, fans	CPM, CCM, XCM, XMA, C-XMA, APEQ, SFM, fans
Dimensions	1 standard 19-in rack 44 RU • Height: 195.6 cm (77 in) • Width: 44.5 cm (17.5 in) • Depth: 106.3 cm (41.9 in)	1 standard 19-in rack 39 RU (44 RU with top plenum) • Height: 173 cm (68.25 in) • Width: 44.5 cm (17.5 in) • Depth: 91 cm (36 in)
Weight* (max)	612.35 (1,350 lb)	535.2 kg (1,180 lb)
Power	• -48 V DC (12 60A/80A inputs) • 260-400 V DC (12 inputs) • 200-240 V AC (12 inputs)	• -48 V DC (12 60A/80A inputs) • 260-400 V DC (12 inputs) • 200-240 V AC (12 inputs)
Cooling	Front/bottom to back	Front/bottom to top/back

* Weights and dimensions are approximate and subject to change.
Refer to the appropriate installation guide for the current weights and dimensions.

Table 2. Nokia 7950 XRS XMA/C-XMA support per chassis type

XMA types (FP4)	Ports per XMA	Connector type	XRS-20e	XRS-20
10/40/100GE Universal	24	QSFP28	4,800/960/480	3,200/640/320
400GE clear channel	6	CFP8	120	80
XMA types (FP3)	Ports per XMA	Connector type	XRS-20e	XRS-20
1GBASE (200G C-XMA)	36/72	SFP/CSFP	720/1,440	720/1,440
10GBASE (200G C-XMA)	20	SFP+	400	400
10GBASE (400G XMA)	40	SFP+	800	800
40GBASE (200G C-XMA)	6	QSFP+	120	120
100GBASE (200G C-XMA)	2	CFP	40	40
100GBASE (400G XMA)	4	CXP, CFP2	80	80
100G DWDM (200G XMA)	2	LC (OTU4)	40	40

Feature and protocol support highlights

Protocol support within the 7950 XRS family includes (but is not limited to):

- Intermediate System-to-Intermediate System (IS-IS), Open Shortest Path First (OSPF), and Multiprotocol Border Gateway Protocol (MBGP) IPv4 and IPv6 unicast routing
- Internet Group Management Protocol (IGMP), Multicast Listener Discovery (MLD), Protocol Independent Multicast (PIM), and Multicast Source Discovery Protocol (MSDP) IPv4 and IPv6 multicast routing
- MPLS Label Edge Router (LER) and Label Switching Router (LSR) functions, with support for seamless MPLS designs
- Label Distribution Protocol (LDP) and Resource Reservation Protocol (RSVP) for MPLS Signaling and Traffic Engineering with Segment Routing support, Point-to-Point (P2P) and Point-to-Multipoint (P2MP) Label Switched Paths (LSPs) with Multicast LDP (MLDP) and P2MP RSVP, weighted Equal-Cost Multi-path (ECMP), Inter-AS Multicast VPN (MVPN) and Next Generation Multicast VPN (NG-MVPN)
- P2P Ethernet virtual leased lines (VLLs), Ethernet VPNs (EVPNs), EVPN-MLDP, EVPN-VPWS, Virtual Extensible LAN (VXLAN), EVPN-VXLAN to VPLS/EVPN-VPLS gateway functions
- Multipoint Ethernet VPLS and IP VPNs for use in delivering core infrastructure services
- Ethernet port expansion through remote Nokia 7210 Service Access Switch (SAS) Ethernet satellites, each offering 24/48GE ports over a 4 x 10GE Link Aggregation Group (LAG) under 7950 XRS control
- Unicast Reverse Path Forwarding (uRPF), RADIUS/TACACS+, and comprehensive control plane protection features for security
- Extensive OAM features, including Cflowd, Ethernet Connectivity Fault Management (CFM) (IEEE 802.1ag, ITU-T Y.1731), Ethernet in the First Mile (EFM) (IEEE 802.3ah), Two-Way Active

Measurement Protocol (TWAMP), Bi-Directional Fault Detection (BFD), and a full suite of MPLS OAM tools, including GMPLS UNI

- Intelligent packet classification, queue servicing, policing and buffer management
- Industry-leading high availability, including nonstop routing, nonstop services, ISSU, fast reroute, pseudowire redundancy, ITU-T G.8031 and G.8032, weighted mixed-speed link aggregation
- Management via CLI, SNMP MIBs, NETCONF/YANG and service assurance agent (SAA) with comprehensive support through the Nokia NSP
- Multivendor SDN control integration through OpenFlow, PCEP and BGP-LS interface support

Environmental specifications

- Operating temperature: 5°C to 40°C (41°F to 104°F)
- Operating relative humidity: 5% to 85%
- Operating altitude: Up to 4000 m (13,123 ft) at 30°C (86°F)

Safety standards and compliance agency certifications

- IEC/EN/UL/CSA60950-1
- FDA CDRH 21-CFR 1040
- IEC/EN 60825-1 (applies to optical receivers)
- IEC/EN 60825-2 (applies to optical receivers)

EMC emission

- ICES-003 Class A (with EMI/Protection panel)
- FCC Part 15, Subpart B, Class A (with EMI/Protection panel)
- EN 55032 Class A
- CISPR 32 Class A
- AS/NZS CISPR 32 Class A
- VCCI Class A
- KN 32 Class A
- EN 61000-3-2

- EN 61000-3-3
- EN 61000-6-4, Class A
- ETSI EN 300 386, Class A

EMC immunity

- ETSI EN 300 386
- EN 55024
- KN 35
- CISPR 24
- BT GS7
- EN 61000-6-2 Immunity for industrial environments
- EN 61000-4-2 Electric Static Discharge
- EN 61000-4-3 Radiated, RF, EM field immunity
- EN 61000-4-4 Electrical Fast Transients
- EN 61000-4-5 Surge Immunity
- EN 61000-4-6 Immunity to conducted disturbances
- EN 61000-4-11 Voltage dips & short interruptions

Environmental

- ETSI EN 300 019-2-1 Storage Tests, Class 1.2
- ETSI EN 300 019-2-2 Transportation Tests, Class 2.3

- ETSI EN 300 019-2-3 Operational Tests, Class 3.2
- ETSI EN 300 019-2-4, pr A 1 Seismic
- ETSI EN 300 132-2 DC Power Supply Interface
- ETSI EN 300 132-3-1 HVDC Power Supply Interface
- WEEE
- RoHS
- China CRoHS

Network Equipment Building System (NEBS)

- GR-1089-CORE
- GR-63-CORE
- RBOC requirements
 - ATIS-0600015.03
 - ATT-TP-76200
 - VZ-TPR-9205
 - VZ-TPR-9305

MEF certifications

- CE 2.0
 - Certified (on E-LAN, E-Line, E-Tree and E-Access MEF service types)
 - 100G Certified (on E-Line and E-Access MEF service types)
- CE 1.0 (MEF 9 and MEF 14) certified

* The system design intent is per the specification and standards listing.
Refer to product documentation for detailed compliance status and protocol standards support.

About Nokia

We create the technology to connect the world. Powered by the research and innovation of Nokia Bell Labs, we serve communications service providers, governments, large enterprises and consumers, with the industry's most complete, end-to-end portfolio of products, services and licensing.

From the enabling infrastructure for 5G and the Internet of Things, to emerging applications in digital health, we are shaping the future of technology to transform the human experience. networks.nokia.com
